

Program a mixer system in CODESYS. The mixer should start when the Start button is pressed and both conditions are satisfied: the lid is closed and the operator is ready. Once started, it should keep running even after the Start button is released.

Add another situation: when Auto mode is active, the mixer can run automatically when only the lid is closed (operator ready is not required). The mixer must stop if the Stop button is pressed or if the lid opens.

● After completing the project, submit your work by sharing a screenshot or your CODESYS program.
